CAMPUS CANTEEN PRE-ORDER SYSTEM

Dhanush J **25MCAC18** · Anusha G **25MCAC11**

Kristu Jayanti College (Deemed to be University), Bengaluru

PROBLEM DEFINITION

What a canteen queue actually costs

- Long queues eat into short breaks between classes
- No visibility into stock — dishes turn out sold out only after queuing
- No tracking from order to pickup, so students wait blind
- No filtering for health-conscious students on a static paper menu
- Manual tokens and cash-only lines slow checkout and invite disputes

OBJECTIVES

What Token sets out to do

1

Pre-order from anywhere

Browse the live menu and order ahead from any device

2

Real-time order tracking

Placed, Accepted, Cooking, Ready, Collected — visible at every stage

3

A live counter dashboard

Staff manage the queue and stock without manual bookkeeping

4

An AI ordering assistant

Recommends by budget, diet and time, including healthy-eating picks

5

Flexible payment

Pay online by UPI or offline at the counter, whichever is faster

6

A familiar, fast experience

Built around pickup, with the polish of apps students already use

PROPOSED METHODOLOGY

How Token is built

SYSTEM ARCHITECTURE

Student App React + Vite front end

↓

Data & API Layer Mirrors the REST endpoints exactly

↓

Live Order Engine Pushes status updates as orders move

↓

Counter Dashboard Queue view and stock control for staff

Same interface throughout — the Node/Express + MongoDB backend already built drops in without changing the front end.

ORDER LIFECYCLE

An in-browser kitchen ticker advances demo orders on a timer, the same stages a live counter would move them through by hand.

Development approach: iterative, feature by feature, validated by a 58-check automated test suite covering auth, ordering, coupons, permissions and the assistant before any UI was wired to it.

TOOLS & TECHNOLOGY

What Token runs on

FRONTEND

- React
- Vite
- React Router
- Framer Motion

BACKEND

- Node.js
- Express
- MongoDB
- Socket.io
- JWT Auth

INTELLIGENCE

- AI Ordering Assistant
- Rule-Based Fallback

TESTING & DESIGN

- 58-Check Test Suite
- Custom Visual Identity
- Original Food Photography

EXISTING SYSTEM VS TOKEN

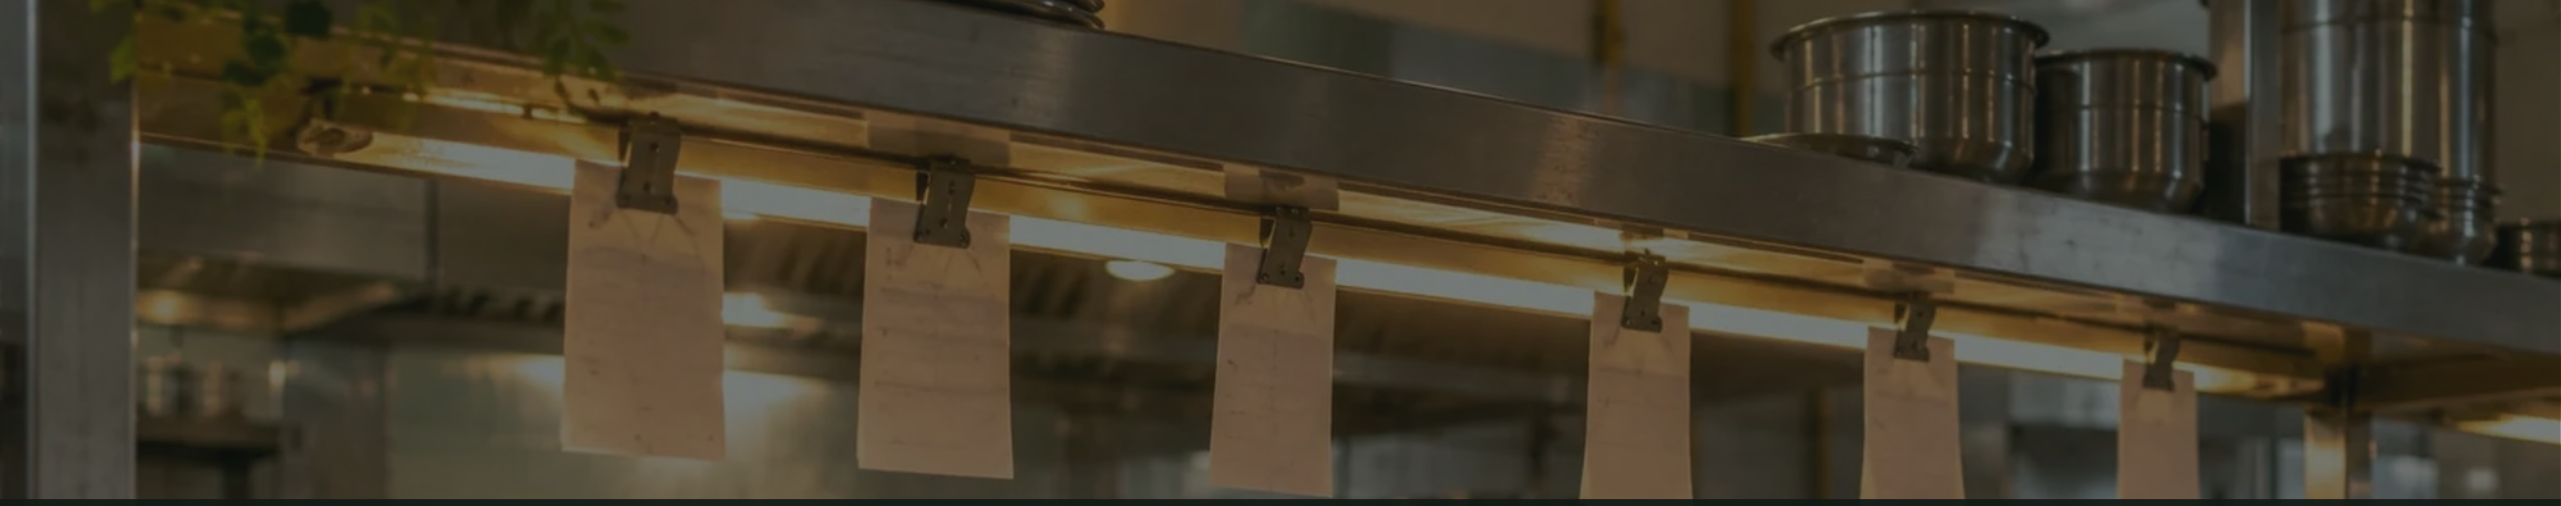

Why pre-order changes the counter

EXISTING CANTEEN PROCESS

- ✕ Physical queue with no visibility into wait time
- ✕ No live stock — dishes go sold out mid-queue
- ✕ No order tracking or status updates
- ✕ Manual, verbal tokens — easy to dispute
- ✕ No feedback loop from students to the kitchen
- ✕ Cash-only, one-speed checkout

TOKEN

- ✓ **Order ahead, walk over only when it is ready**
- ✓ **Live menu — stock updates instantly for everyone**
- ✓ **Real-time tracking, Placed through to Collected**
- ✓ **Digital, numbered tokens — nothing to dispute**
- ✓ **Ratings and reviews feed back to the kitchen**
- ✓ **Online UPI or pay offline at the counter**

TOKEN

Thank You
